

Optimise

design for optimal
human performance

Optimise provides a range of ergonomics/human factors consulting services:

- Assessment and intervention for musculoskeletal injury risks
- Office workstation assessments
- Design work including human modelling and working with design/purchasing teams
- Incident investigation
- Research
- Training and presentations

Ergonomists/human factors professionals use human-centred design to optimise the fit between what we do, the things we use, and the environments we work in.

Services provided nationwide - Call us
to discuss your needs: (64) 027 626 1300

Marion Edwin CNZHFE (Principal Ergonomist and Optimise Director) is a recognised ergonomics professional and skilled workplace consultant. Marion has provided ergonomics service to NZ businesses for more than 15 years, and has experience in many industries and sectors. She has worked in casinos, sawmills and forests, meat and seafood processing, warehousing, a range of food processing and heavy manufacturing environments, retail, hospitality and service industries, farming sector, infrastructure, health services, science and research, education, banking, on fishing vessels, and in a wide range of corporate and office environments - and more.

Optimise Associates **Sue Alexander AssocNZHFE** and **Leanne Hunter AssocNZHFE** provide further expertise and additional manpower to Optimise. Both are experienced workplace consultants offering a variety of skills – Sue is our manual handling and healthcare specialist, and Leanne is our CAD human modelling specialist (in association with JSK Engineering, Christchurch).

- **Flexible approach** - services may be as simple as a 'walk through' overview with discussion, or complex – such as full work system assessment with detailed risk analyses.
- **Practical, honest and skilled** consultancy delivered in a timely and professional manner with full client confidentiality.
- **Focus** on system performance and productivity alongside health and safety.
- **Working** within health and safety and design standards.
- **Robust analysis** ensures the selection of appropriate risk mitigation methods.
- **Effective communicators**, working respectfully with managers and workers from all levels in the organisation and from all cultures and backgrounds.
- **Deliver** prioritised recommendations with guidelines on implementation and evaluation.
- **Maintain** safe and healthy behaviours in all work settings.
